

Ideation phase-I

1. Brainstorm & Idea Prioritization

1.1 Brainstorming - Divergent Thinking

Theme 1 - Rules: Keyword-based routing, Regex patterns Theme 2 - AI/ML: TF-IDF + NB, BERT, Predictive Intelligence, LLM API, Sentiment escalation Theme 3 - Automation UX: Flow Designer trigger, Email-to-ticket parser, Virtual Agent, KB suggestion, Dashboard feedback loop

1.2 Idea Prioritization Matrix

Framework: Impact vs Effort. Scale: High/Medium/Low

Figure: Impact vs Effort - Flow Designer is High Impact Low Effort, hence selected for MVP

Final Selected Ideas for MVP

1. Flow Designer Trigger on Incident Creation 2. NLP Model (TF-IDF + NB / BERT) for Category, Sub-category, Assignment Group 3. Priority Prediction Logic 4. Fallback to Manual Triage if confidence < 60%

Date	28.09.2026
Team ID	SWTID-2026-6482
Project name	Auto Ticket Classification using Flow Designer

S.No	Idea Generated	Description
1	Keyword-based Auto Routing	Simple rule: IF contains 'password, login' THEN IAM Team
2	ML Model Classification	Train NLP model on historical tickets to predict Category / Group
3	Predictive Intelligence in ServiceNow	Use ServiceNow OOB Predictive Intelligence
4	LLM / Generative AI Classification	Use BERT / GPT API to understand ticket intent
5	Flow Designer No-Code Automation	Build automated flow triggered on ticket creation
6	Priority Prediction Engine	Predict P1-P4 based on impact + urgency keywords
7	Auto KB Suggestion	Suggest relevant Knowledge Base article while classifying

8	Sentiment Based Escalation	Detect angry / urgent tone and auto-escalate
---	----------------------------	--

Idea	Impact	Effort	Priority
ML Model Classification	High	Medium	P0 - Must Have
Flow Designer Automation	High	Low	P0 - Must Have
Predictive Intelligence OOB	High	Low	P0 - Must Have
Priority Prediction Engine	High	Medium	P1 - Should Have
Keyword-based Routing	Medium	Low	P1
Auto KB Suggestion	Medium	Medium	P2 - Good to Have
