

Project Planning Phase –IV

1) Performance Testing

Objective of Performance Testing

The objective of Performance Testing is to ensure that the developed solution works as expected, meets all functional requirements, follows basic security best practices, and performs efficiently under expected load. This phase validates end-to-end automation, confirms data accuracy, and ensures response time is within acceptable limits. As per the PDF, this is part of PHASE 4: Testing, Validation & Security.

Data Validation Checks (From PDF)

- Mandatory fields captured correctly.
- Auto-number generated without duplication.
- Category and Subcategory values stored accurately.
- Reference fields resolve correctly to user and group tables.

Performance Testing - Test Scenarios

Performance Testing Diagram

Navigation Steps for Performance Testing (As per PDF style)

- Go to All menus → Search for Flow Designer.
- Open Flow: Auto Classify School IT Tickets.
- Click on Executions tab to check execution time.
- Go to All menus → Search for Incident Workflow Table.
- Open any record and check Category auto-filled time.
- Go to All → System Logs → Emails → Check Sent Time vs Created Time.
- For accuracy, export incidents to Excel and manually verify Category vs Description.

Date	28.09.206
Team ID	SWTID-2026-6482
Project Name	Auto Ticket Classification using Flow Designer

	Steps (As per PDF Style)
	Enter Caller Name + Short Description: WiFi not working in library ->
	Create 25 tickets each for WiFi, Projector, Password, Slow Computer
	Create ticket -> Check System Logs -> Emails -> Search Subject 'Yo
	Create 20 tickets simultaneously from different user accounts -> Mon
category list shows only Wi-Fi -> Repeat for Hardware, Access, Performance	Dependency mapping works instantly, no delay
	PASS
